

# HYDAC Service Centre

A world leader in Fluid Technology, HYDAC International operates in over 45 countries with more than 8,000 employees and 500 sales and service partners worldwide.

**H**YDAC offers an extensive product range to cover all areas of fluid power including hydraulic and lubrication systems, hydraulic filtration, accessories, hydraulic pumps, accumulators, valves, electronics, condition monitoring, process filtration, cooling systems and hydraulic cylinders.

It operates in Australia and New Zealand with world class technical sales engineering offices in Melbourne, Sydney, Newcastle, Brisbane, Adelaide, Perth and Auckland and a centre of excellence design, manufacturing and training centre in Melbourne.

HYDAC's technical training courses are nationally accredited and the only one of its kind in Australia, offering practical training in a variety of topics, such as: hydraulics, accumulators and thermal optimisation.

The company's products are locally engineered, manufactured and tested, and are under a quality system certified in accordance with ISO9001. Recently it announced the ISO 29001 certification.

HYDAC considers the continuous operation of hydraulic systems in the field a major responsibility. In order to guarantee this it has a service team with qualified service engineers available to provide worldwide service.

Working with service partners HYDAC can offer you a complete package of services. It develops individual solutions according to the requirements.

By offering a range of services that use proper maintenance and inspection procedures, HYDAC helps increase the useful life of hydraulic plants, lubrication systems, electro-hydraulic controls and regulators.

The company's worldwide service team offers repairs, installation, commissioning, maintenance and troubleshooting on-site, all coordinated by qualified servicing staff. It can supply spare parts, replacement parts and original replacements for all brands. For complete service jobs it can offer mobile flushing units, power packs and necessary analysing and measuring equipment.

Repair and overhaul work can be carried out on-site or in the fully equipped workshops at several locations in the world.
